GSM1800 Channel Selective Repeater

RD-1822

Features

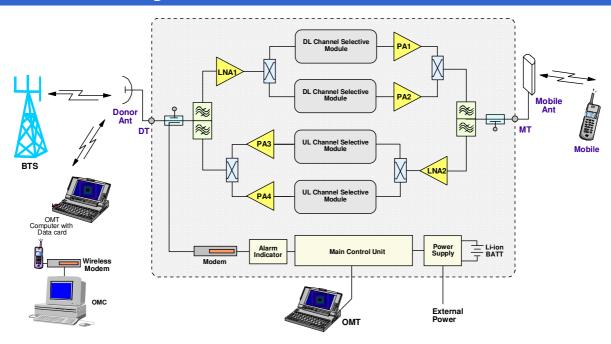

- Permits rapid selection of frequency when operating in a tightly spaced channel environment.
- 75MHz operating bandwidth.
- Integrated wireless modem for remote configuration, monitoring and control.
- Internal backup battery keeps the alarm unit running for up to three hours after power failure.
- Optional OMC is available for remote operation and maintenance of a group of repeaters.
- Designed for all outdoor application waterproof, damp-proof and omni-sealed (IP65).
- EDGE Compatible.
- ETS 300 609-4 Compliant.

Product Description

The RD-1822 channel-selective repeater is designed for GSM1800 network. Channel-specific linear amplifier and filtering effectively amplifies the desired BTS carriers and provides superior out-of-band rejection. The unit can incorporate up to eight pairs (uplink and downlink) of channel modules with frequencies programmed to specific requirements of the network. Remote configuration and surveillance is possible through Comba's remote control and monitoring system via PC or wireless modem to the OMT/OMC. Internal Li-ion backup battery ensures alarm signals are sent out during power failure. The RD-1822 comes in a sealed, cast aluminum enclosure, suitable for operation in all weather conditions.

GSM1800 Channel Selective Repeater

RD-1822

Operation and Maintenance

Using a direct serial connection to a PC, installation and commissioning of the RD-1822 is accomplished by the OMT. Using the integrated wireless modem (data or SMS mode), the equipment parameters can be monitored and controlled remotely.

Controlled equipment parameters include: Channel No. Range, ATT, Carrier Switch, RF Switch, Over-Temp Threshold, DL Input Power Overload Threshold, DL Output Power Low Threshold, VSWR Threshold and Alarm Report Enable.

Monitored equipment parameters include: Alarms (LNA, PA, PLL unlock, Power Down, PSU Fault, Chassis Lock, Self-Oscillation, DL Output Power Low, DL Input Power Overload, Over Temp, VSWR), DL Output Power and DL Input Power

The RD-1822 has been developed to take advantage of advanced network operation, where the OMC (optional) provides an effective solution for central monitoring of a group of Comba products.
